

Water Management Solutions for Underground Construction

Master Builders Solutions

The Master Builders Solutions brand brings all of our expertise together to create chemical solutions for new construction, maintenance, repair and renovation of structures. Master Builders Solutions is built on the experience gained from more than a century in the construction industry.

Our know-how and experience as a global community of Master Builders Solutions construction experts form the core of Master Builders Solutions. We combine the right elements from our portfolio to solve your specific construction challenges. We collaborate across areas of expertise and regions and draw on the experience gained from countless construction projects worldwide. We leverage global Master Builders Solutions technologies, as well as our in-depth knowledge of local building needs, to develop innovations that help make you more successful and drive sustainable construction.

The comprehensive portfolio under the Master Builders Solutions brand encompasses concrete admixtures, cement additives, chemical solutions for underground construction, waterproofing solutions, sealants, concrete repair & protection solutions, performance grouts, and performance flooring solutions.

Global underground construction team

Master Builders Solutions, with its global underground construction team, provides reliable, customer-oriented solutions focused on your needs in the tunneling and mining industries all over the world. We recognize that your success is underpinned by our ability to deliver solutions that meet or exceed your critical needs. By accompanying you from the start of your project and understanding the issues that are important to you, we can contribute to your success. We support you with product training and quality control, and our professional technical services team is on hand around the clock, helping you with specialist technical advice and trouble shooting.

Our comprehensive portfolio

- Concrete admixtures
- Cement additives
- Chemical solutions for underground construction
- Waterproofing solutions
- Sealants
- Concrete repair and protection solutions
- Performance grouts
- Wind turbine grouts
- Performance flooring solutions

Water management for safe, cost-efficient and reliable underground constructions

The tunneling and underground construction industry is facing enormous challenges today: Our clients are aiming at fast economical excavation and construction, low maintenance costs, and 120 years of service life. Stations, caverns, shafts, or tunnels should be attractive, safe and comfortable more than ever. Ground water ingress through concrete and waterproofing systems is feared by contractors and owners because it poses a major threat to their goals.

The challenge is to find the water management solution best suited for the type of tunnel and ground conditions. And this is where we come in. Master Builders Solutions provides you with

high-end water management solutions that are extremely effective, long-lasting, and easily applied. Depending on the type of underground construction you are working on, we offer some pioneering waterproofing technologies with maximum safety and easy maintenance.

Our product systems are tailored to the specific requirements of underground construction designs and various ground conditions. Our water management solutions not only include sheet and spray-applied membranes for optimum water-tightness in Drill & Blast/NATM tunnels and flexible elastic coatings for Cut and Cover tunnels, but also pre-injection technologies to help protect the environment and improve the ground.

Mastering underground construction challenges requires the right partner. Continuous innovation and customized solutions ensure that customers using Master Builders Solutions operate successfully and to the highest safety standards.

Waterproofing Solutions for Drill & Blast/NATM Tunnels

Are mitigating measures necessary to improve conditions and make construction easier? Are proven sheet membranes the right choice, or rather innovative spray-applied double-bonded membranes? We can give you sound advice on which water management technologies are the best match for your specific project.

On the safe side with pre-injection

Unexpected water ingress and bad ground conditions are feared among contractors working in underground construction. There are high costs involved, the environment takes damage, and construction time is delayed. Thankfully, there is a cost- and time-efficient approach to minimize the risk. Pre-injecting the ground ahead of the advancing face helps avoid water ingress and fortify the ground. Microcements and colloidal silica – also known as mineral grout – make underground construction a lot safer. Moreover, they are eco-friendly.

- MasterRoc MP microcements for pre-injection application, providing extremely effective penetration into fine cracks in rock and fine grained soils
- MasterRoc MP 320 and MP 325 colloidal silica gels (“mineral grouts”) for water sealing and ground stabilization in jointed rock and fine grained soils, as a supplement to microcement injection
- MasterRoc MP 350 series of polyurethanes and the fire resistant MasterRoc MP 360 series of polyurea silicates for water stopping and sealing, strata consolidation, and cavity filling applications

A watertight system with cutting-edge sheet membranes

Sheet membranes offer an economical and reliable way for waterproofing tunnels. To prevent ground water ingress through the tunnel lining, they are installed between the primary sprayed concrete support and the permanent concrete lining.

Depending on the water conditions in the tunnel, there are different design options: single layer with double seam welding, compartmentalization to improve water tightness, and an injection system for easier maintenance and repair. The double layer vacuum system offers maximum quality control and reparability.

- MasterRoc WP 1700: Synthetic plasticized PVC membrane for horizontal & vertical waterproofing
- MasterRoc WP 1950: PVC waterstop for construction joints treatment & compartmentalization
- MasterRoc WP 1780: Re-Injectable hose system for sealing construction & cold joints

Sprayable waterproofing membrane as a clever master plan

MasterSeal 345 is a new advanced concept for waterproofing based on a double-bonded sprayable waterproofing membrane. It can resolve technical problems which have proved difficult with conventional sheet membranes by preventing the migration of water on either side of the membrane.

In case of rehabilitation of old tunnels, this innovative membrane is particularly suitable for projects with limited space. It brings great benefits for concrete structures with complex geometries, offering a flexible and continuous waterproofing system without discrete joints, water stops, or compartmentalization.

The simple spray-on procedure makes installation very fast getting you ahead of schedule.

Application areas:

- New tunnels
- Refurbishment projects
- Cross passages
- Tunnel intersections

Advantages:

- Easy application by spraying with standard equipment
- Two-sided bond with sprayed-concrete allows for composite behavior
- The fully bonded system provides excellent water tightness preventing development of water migration in both concrete membrane interfaces

Challenging Projects Solutions

1. Metro Crossrail, London, UK

Scheduled to be up and running in 2018, the new Elizabeth line built by Crossrail Limited is the largest construction project ever undertaken in Europe. As the design made undrained spray-applied waterproofing necessary, MaterSeal 345 was selected after extensive testing. Thanks to accurate production planning, transport, and emergency stocks kept available, Master Builders Solutions was able to supply 200,000 m² MasterSeal 345 on time.

2. Spadina Subway, Toronto, Canada

The Toronto-York Spadina Subway Extension Project will be the first rapid transit line to cross the boundary between the City of Toronto and the York Region. As some of the stations were constructed by SEM (sequential excavation sequence), a waterproofing solution was needed that could be applied without large equipment that would disturb the construction works. MasterSeal 345 was selected because of its flexibility and fast application. 6,000 m² MasterSeal 345 were used in total.

3. Metro Monterrey, Monterrey, Mexico

As Monterrey's population is constantly growing, public transport development has long been a priority. To expand the Monterrey Metro also known as Metrorrey, a third line has been constructed between Estación Zaragoza and Hospital Metropolitano consisting of 7.5 km of track and eight passenger stations. MasterSeal 345 provided the flexibility and easy application the contractor was looking for, and 7,000 m² were applied in the station sections.

4. SS106 Jonica Autostrada, Calabria, Italy

The Strada Statale 106 is a traditional highway in Calabria in the south of Italy. It has several tunnels, some of which were refurbished in 2011. These tunnels needed to stay open during refurbishment, so only one half of the tunnel could be waterproofed at a time. As it is fast to apply and flexible, MasterSeal 345 was chosen. 70 to 100 m² could be applied per hour, while cars crossed through the tunnel as usual. 11,000 m² MasterSeal 345 were used in total.

Our double-bonded spray-applied waterproofing membrane MasterSeal 345 merges high-performance, easy application and cost-efficiency, setting new standards for waterproofing. Already, there are various large underground construction projects in different parts of the world where the technology was successfully used.

Waterproofing Solutions for Cut and Cover Tunnels

Serviceability and easy maintenance are major concerns when building underground constructions such as Cut and Cover tunnels. Waterproofing is an excellent option to reduce maintenance costs significantly. Waterproofing coatings on the exterior of the tunnel have the advantage that water cannot move behind this barrier, even if the coating is damaged.

Waterproofing coating

MasterRoc WP 1800 is a flexible, seamless elastic coating on the extrados of the tunnel with fast application, instantly reacting 2K system, and high durability. The spray applied and fast setting coating can easily be applied on vertical surfaces and has no issues with complex geometries. It is fire-resistant, remains elastic at low temperatures and prevents leakage even when punctured, because it bonds with the concrete.

1. One coat MasterRoc WP 1800
2. Primer MasterTop P 617
3. Concrete clean and sound substrate

Keeping Water out on the Long Run: Repair and Maintenance after Completion

When the underground construction is completed, the ability to swiftly deal with unexpected water ingress and cracks is paramount. We have the right products to help you stop water and make repairs without hassle or delay. Additionally, you can benefit from our acrylics injection products allowing the repair of sheet membrane systems.

Crack sealing and concrete rehabilitation

Our range of acrylic resins is perfect for rehabilitation injection of cast concrete, segment linings, and brick & masonry lined tunnels.

Acrylic resins:

- MasterRoc MP 303 CE
- MasterRoc MP 307 CE

Water stopping

Foaming, water-sensitive polyurethanes are designed to combat water ingress quickly and effectively. For particularly difficult cases, the solution is a combination of drainage and the injection of a fast-reacting foaming resin.

Polyurethanes:

- MasterRoc MP 355 1K
- MasterRoc MP 355

Training and education

Master Builders Solutions brings extensive know-how gained through worldwide experience in solving challenging situations in mechanized tunneling. In addition, we support our clients, contractors, and consultants by frequently offering technical trainings and specialized seminars. Whenever required, and especially in the case of large projects, tailored on-site training can be organized.

Technical services

Master Builders Solutions supplies more than just specialty products for underground construction, assisting in the selection of the most suitable combination of products for each project specific geology, as well as providing start-up supervision and site support.

More brochures on our underground construction solutions are available at <https://ugc.master-builders-solutions.com>.

- Method statements

Master Builders Solutions for the Construction Industry

MasterAir

Complete solutions for air entrained concrete

MasterBrace

Solutions for concrete strengthening

MasterCast

Solutions for the manufactured concrete product industry

MasterCem

Solutions for cement manufacture

MasterEase

Low viscosity for high performance concrete

MasterEmaco

Solutions for concrete repair

MasterFinish

Solutions for formwork treatment and surface improvement

MasterFlow

Solutions for precision grouting

MasterFiber

Comprehensive solutions for fiber reinforced concrete

MasterGlenium

Solutions for high performance concrete

MasterInject

Solutions for concrete injection

MasterKure

Solutions for concrete curing

MasterLife

Solutions for enhanced durability

MasterMatrix

Advanced rheology control for concrete

MasterPel

Solutions for hydrophobization, anti-efflorescence and surface protection

MasterPolyheed

Solutions for mid-range concrete

MasterPozzolith

Solutions for water-reduced concrete

MasterProtect

Solutions for concrete protection

MasterRheobuild

Solutions for high strength concrete

MasterRoc

Solutions for underground construction

MasterSeal

Solutions for waterproofing and sealing

MasterSet

Solutions for set control

MasterSphere

Solutions for guaranteed freeze-thaw resistance

MasterSuna

Solutions for sand and gravel in concrete

MasterSure

Solutions for extraordinary workability retention

MasterTop

Solutions for industrial and commercial floors

Master X-Seed

Advanced accelerator solutions for concrete

Ucrete

Flooring solutions for harsh environments

QUANTIFIED SUSTAINABLE BENEFITS ADVANCED CHEMISTRY BY MASTER BUILDERS SOLUTION

Let the numbers do the talking: We have portrayed some of our most eco-efficient product solutions for concrete and precast production, construction, civil engineering, and flooring.
