

# MasterKure<sup>®</sup> 106

## Water based concrete curing compound / bond breaker

### DESCRIPTION

**MasterKure 106** is a solvent free, membrane forming wax emulsion, suitable for spray application to freshly poured concrete.

The resultant film retains sufficient moisture in the concrete to ensure full hydration of the cement; essential for optimum strength development. Membrane cured concrete is typically harder and exhibits a dust free surface with a reduced incidence of drying shrinkage cracks.

The film can also act as a bond breaker between initial and subsequent concrete pours.

### TYPICAL APPLICATIONS

As a more effective and economical alternative to hessian and water and polythene curing regimes. Suitable for use on all concrete surfaces.

As a bond breaking film for the vertical face of precast bridge segments during match casting.

### ADVANTAGES

- Eliminates the need for water
- Single application
- Promotes a harder dust free surface
- Cured film is clear and water repellent
- Reduces drying shrinkage
- High curing efficiency
- Reduced labour costs
- Water based

### PACKAGING

**MasterKure 106** is available in 210 litre drums.

### STANDARDS

ASTM C309 Type 1 Class A  
 AASHTO M-148 Type 1 Class A

### TYPICAL PROPERTIES\*

Appearance	White liquid
Specific gravity	1.00
Flashpoint	Not applicable
Finished film appearance	Clear, tack free, water repellent film
Water retention ASTM C156	Pass
Drying time ASTM C309	Less than 4 hours

### DIRECTIONS FOR USE AS A CURING COMPOUND

The compound should be spray applied as evenly as possible on to the freshly placed concrete.

For horizontal surfaces **MasterKure 106** should be applied as soon as the initial surface sheen has disappeared from the concrete surface. In the case of formed concrete, the **MasterKure 106** should be applied immediately on removal of the formwork. To assist breakdown of the **MasterKure 106** film on vertical and formed surfaces, it is essential to dampen down the concrete with clean water prior to application.

### DIRECTIONS FOR USE AS A BOND BREAKER

The compound should be spray applied to form an even film covering the entire surface against which the subsequent segment will be cast.

If necessary, more than one coat should be applied. The actual coverage and number of coats will be dependent on texture and porosity of the surface. The recommended application rate when used as a bond breaker is 4 square meters per litre.

### FILM BREAKDOWN

The time for deterioration of the membrane is dependent on a number of variables, which include film thickness, degree of exposure to weathering, traffic, UV light, and the porosity of the substrate concrete.

# MasterKure® 106

## SUBSEQUENT SURFACE FINISHES

It is important that the complete removal of the **MasterKure 106** should be ensured prior to the application of any surface finish or additional treatment. It is recommended that where the concrete is to receive a coating or the application of tiles, the use of **MasterKure 181** is considered.

**MasterKure 181** is a resin based non-degrading curing membrane meeting the requirements of ASTM C-309 Type 1 Class B. It is additionally formulated to act as a primer for many finishes or to seal concrete surfaces and provide a degree of abrasion to flatwork.

## SPECIFICATION CLAUSE

Where indicated, concrete shall be cured by application of **MasterKure 106**, membrane forming wax emulsion manufactured by Master Builders Solutions or similar approved; to the following specification:

Specification type: ASTM C309: Type 1 Class A  
 AASHTO M-148

**MasterKure 106** is to be applied at a coverage rate of 5 to 6 m<sup>2</sup>/litre and strictly in accordance with the manufacturer's instructions.

## COVERAGE / YIELD

The recommended rate of application is 5-6 m<sup>2</sup>/litre. This corresponds to that at which **MasterKure 106** has been tested, and at which it attains the claimed degree of curing efficiency. In favourable conditions such as shaded interior surfaces, adequate curing can be achieved with extended coverage rates.

## STORAGE AND SHELF LIFE

Shelf life is up to 12 months when stored under cover, out of direct sunlight and protected from extremes of temperature.

## HEALTH AND SAFETY

As with all chemical products, care should be taken during use and storage to avoid contact with eyes, mouth, skin and foodstuffs. Treat splashes to eyes and skin immediately. If accidentally ingested, seek medical attention. Reseal containers after use. Use in well ventilated areas and avoid inhalation.

## QUALITY AND CARE

All products originating from Master Builders Solutions Dubai, UAE facility are manufactured under a management system independently certified to conform to the requirements of the quality, environmental and occupational health & safety standards ISO 9001 and ISO 14001.

\* Properties listed are based on laboratory controlled tests.
